

GISSELL BUSTOS

Junior Developer with a background in
Forest Engineering

EXECUTIVE SUMMARY

I'm a forestry engineer from Colombia and a new software developer, recently graduated from the Immersive Software Engineer course at General Assembly.

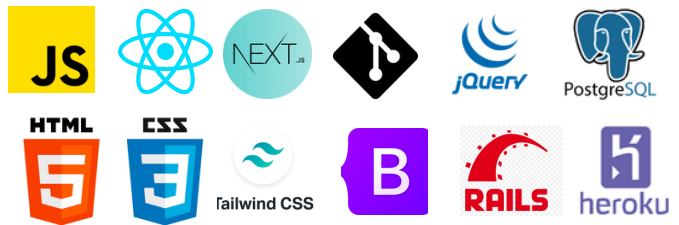

I taught myself the basics of CSS, HTML, and JavaScript and really enjoyed it, which motivated me to pursue deeper education and take the General Assembly course, because of this, I have become passionate about software engineering, particularly the creative and collaborative aspects.

I am most skilled in the core front-end technologies HTML, JavaScript, and CSS, furthermore, I also have experience with ruby on rails, PostgreSQL, and frameworks like React and Next.js which allows me to build well-finished websites across the full stack.
